1. Open the App

2. Tap the burger in the top left to access the ‘Main Menu’

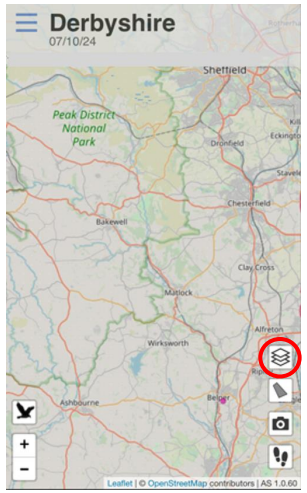

3. Tap ‘Share’

4. Tap ‘Connect to ACE Database’ and enter your credentials
Make sure that ‘Share with ACE Nature’ is set to ‘Immediate’

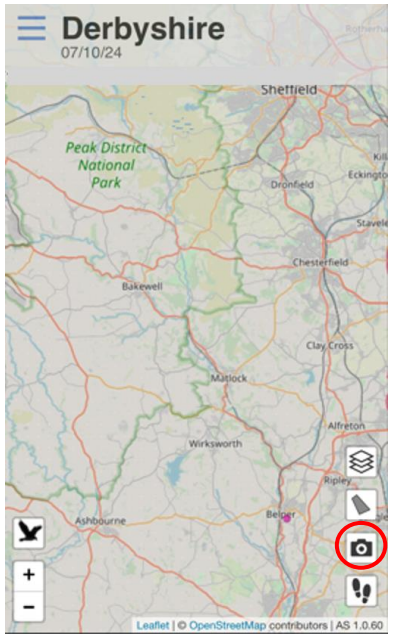

5. Go back to the ‘Main Menu’ and tap on ‘Maps’, and then ‘Add Map’ and select the map relevant to your site

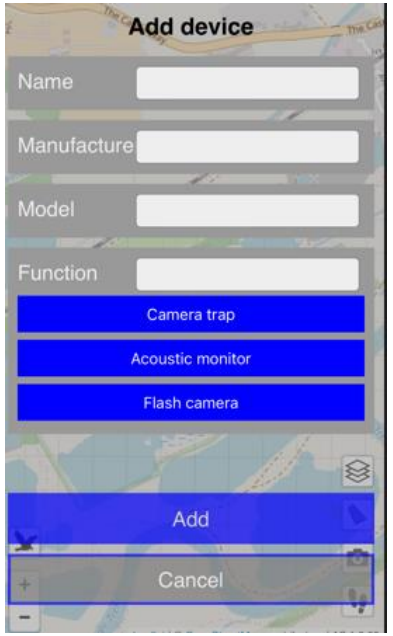

6. Tap the ‘Layers’ icon and make sure that ‘Monitoring devices’ is ticked

Setting up and using ACE Sightings for Trail Camera management *(Part 1)*

7. Tap the ‘Camera’ icon, then tap ‘Add device’

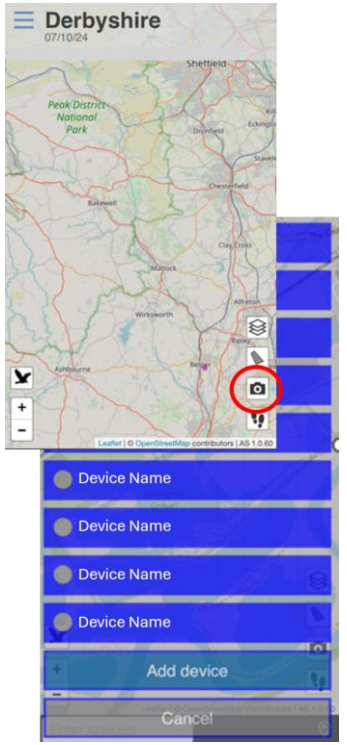

8. Add a camera Name and select the function from the list.

Tap ‘Add’

Repeat this for all devices

9. The App is now ready for taking into the field to deploy cameras.

When at the deployment location, tap the camera icon to see a list of all cameras. Active Cameras will have a green dot next to them, and Inactive ones will have a grey dot.

10. Tap the camera name for the camera being deployed / undeployed and tap Activate / Deactivate.

If the location shows as red, wait for it to change to black to ensure greater locational accuracy. If the locational accuracy is > ~ 20m you will get a warning that the location may be wrong.
